

Project Profile - Buildings & Commercial Construction

PROJECT

RAF Leuchars, Fife

SUMMARY

Waterproofing of 11 concrete hangar roofs totalling 2,000m² at major Air Force base.

PRODUCTS

Cementitious Coating 851
Cemprotec Elastic
Monolevel 844SP
Cemprotec EF Primer
Cemprotec Edge Scrim

CLIENT

Royal Air Force Defence Estates

CONTRACTOR

Midland Industrial Flooring Ltd

BACKGROUND ▶

RAF Leuchars, based close to Dundee in Scotland, is the principal operational fighter station for the Royal Air Force and one of the busiest bases in Air Command.

RAF Leuchars plays a critical part in the defence of the UK and its territorial waters. It is planned to bring at least two new squadrons of the new European Typhoon Fighters to the base to replace the ageing Tornado, necessitating additional hangar space. As part of the upgrading of the existing facilities to accommodate them, it was decided to waterproof eleven of the concrete roofs.

THE SOLUTION ▶

MOD term contractor Midland Industrial Flooring chose **Cementitious Coating 851** to carry out the waterproofing work, as unlike the more traditional coating systems, it could be applied within the severe weather conditions expected during the winter months. Following sealing of the substrate with the **Cemprotec EF Primer**, cracks and joints were striped coated with **Cemprotec Elastic** and minor voids filled with **Monolevel 844SP** prior to waterproofing the surface with a single 2mm coat of **Cementitious Coating 851**.
